

Preface

In order to make recent results presented in conferences available rapidly to a wide community at a very reasonable cost, the Astronomical Society of India has started a Conference Series. Conferences held either within or outside the country could be published as part of the ASI Conference Series. The Conference Series volumes will be available via the web page of the Bulletin of the Astronomical Society of India (BASI; <http://www.ncra.tifr.res.in/~basi>) as well as ADS. All papers in the Conference Series will be refereed, and its publication will be overseen by the Editorial Board of BASI. We welcome proposals from organisers of astronomical meetings or editors of the proceedings. Enquiries and proposals may be sent to either basi@ncra.tifr.res.in or basi@iiap.res.in.

The first volume of the ASI Conference Series contains the proceedings of an international workshop titled “Interstellar Matter and Star Formation - A Multi-Wavelength Perspective” held from 5th to 7th October 2009 at the TIFR National Balloon Facility, Hyderabad, India, as part of the Homi Bhabha Birth Centenary Celebrations. This volume has been edited by D.K. Ojha from TIFR. Orders for the ASI Conference Series may be placed with A. Satya Narayanan, Treasurer, Astronomical Society of India, Sarjapur Road, Koramangala, Bangalore 560 034, India (satya@iiap.res.in). The price of each volume will be announced via the BASI web page.

We look forward to the support of the astronomical community to make this a success.
